

Protect Your Data from Cyber Attacks

Secure your IT systems to avoid losing data, time, and money.

MDS CyberSafe shields you from IT disruptions of all kinds so your business can operate uninterrupted.

In our global economy, cyber attacks can come from everywhere. More than 80% of these attacks target small-to medium-sized businesses – those often without a full-time IT department or the ability to pay large ransomware demands.

CyberSafe provides best practices for managing your security to reduce risks and constantly monitors your equipment and systems to detect intrusions. We prevent all possible threats and quickly isolate and remediate any breaches to prevent them from spreading throughout the entity. With secure back-ups, CyberSafe ensures your data is confidential, restores it quickly, and keeps your systems running.

Our Comprehensive Approach

- Conduct a full vulnerability assessment.
- Assist in developing and maintaining disaster recovery and business continuity plans.
- Ensure that policies and procedures reflect best practices.
- Continuously update tools so they are effective against new intrusions.
- Test plans on a regular basis so you are ready for any disaster.

Secure customer data

Ransomware protection

Business continuity

Benefits

- Protects customer and company data.
- Blocks malware that can easily spread through a company.
- Reduces ransomware vulnerability.
- Continuously monitors activity on every endpoint.
